## 1. Over View

WAA0213A2CNA6NXX000 is a reflective electrophoretic technology display module on an active matrix TFT substrate. The panel is capable of displaying black, white, yellow and red images depending on the associated lookup table used. The circuitry on the panel includes an integrated gate and source driver, timing controller, oscillator, DC-DC boost circuit, and memory to store the frame buffer and lookup tables, and additional circuitry to control VCOM and BORDER settings.

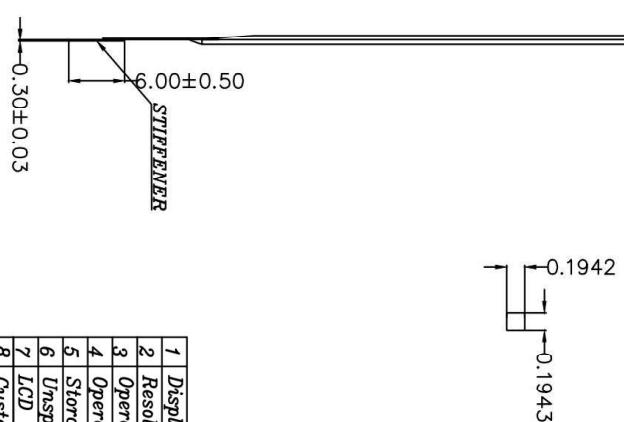

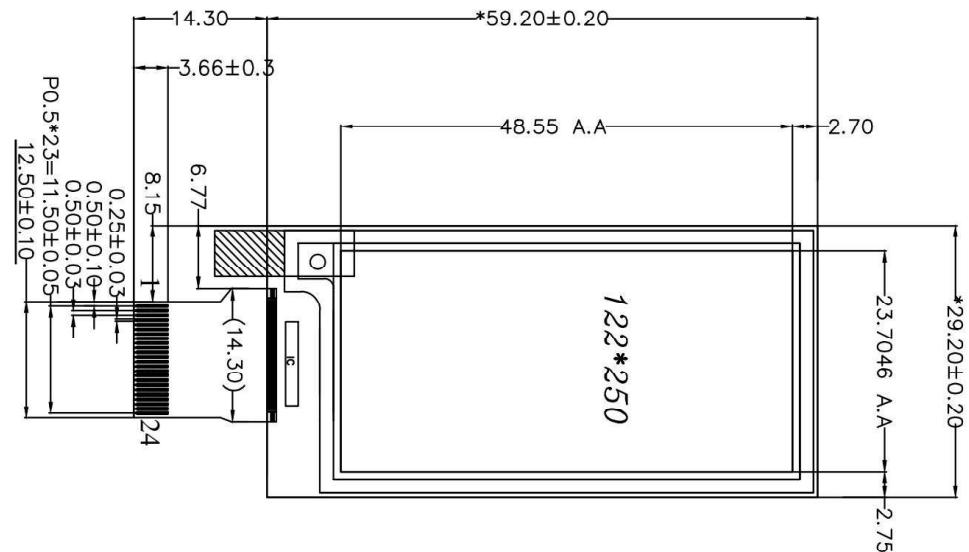

## 2. Features

- Highlight Red and Yellow color
- High contrast
- High reflectance
- Ultra wide viewing angle
- Ultra low power consumption
- Pure reflective mode
- Bi-stable display
- Antiglare hard-coated front-surface
- Low current deep sleep mode
- On chip display RAM
- Waveform stored in On-chip OTP
- Serial peripheral interface available
- On-chip oscillator
- On-chip booster and regulator control for generating VCOM, Gate and Source driving voltage
- I<sup>2</sup>C signal master interface to read external temperature sensor
- Available in COG package

## 3. Mechanical Specifications

| Parameter           | Specifications          | Unit  | Remark  |

## 6. Electrical Characteristics

### 6.1 Absolute Maximum Rating

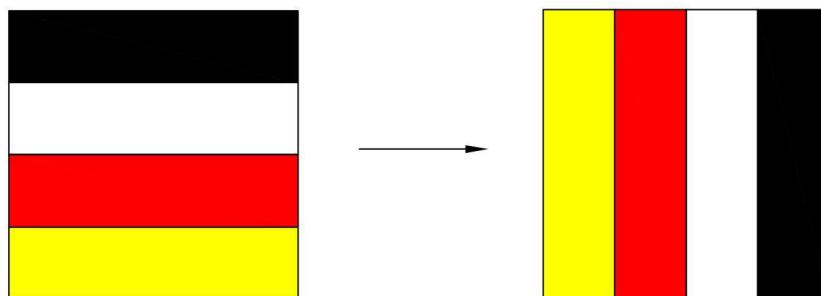

| Parameter                | Symbol                          | Rating            | Unit |
|--------------------------|---------------------------------|-------------------|------|
| Logic supply voltage     | VDD,<br>AVDD,VDDIO,<br>VDD1,VPP | -0.3 to +6.0      | V    |
| Digital input voltage    | VI                              | -0.3 to VDDIO+0.3 | V    |
| Operating Temp range     | TOPR                            | 0 to +40          | °C   |
| Storage Temp range       | TSTG                            | -25 to +70        | °C   |
| Optimal Storage Temp     | TSTGo                           | 23±2              | °C   |
| Optimal Storage Humidity | HSTGo                           | 55±10             | %RH  |

Note: Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this data sheet is not implied. Exposing device to the absolute maximum ratings in a long period of time may degrade the device and affect its reliability.

Notes: 1. The typical power is measured with following transition from horizontal 4 scale pattern to vertical 4 scale pattern.

2. The deep sleep power is the consumed power when the panel controller is in deep sleep mode.
3. The listed electrical/optical characteristics are only guaranteed under the controller & waveform provided by WINSTAR Display.
4. Electrical measurement: Multimeter

## 6.3 AC Characteristics

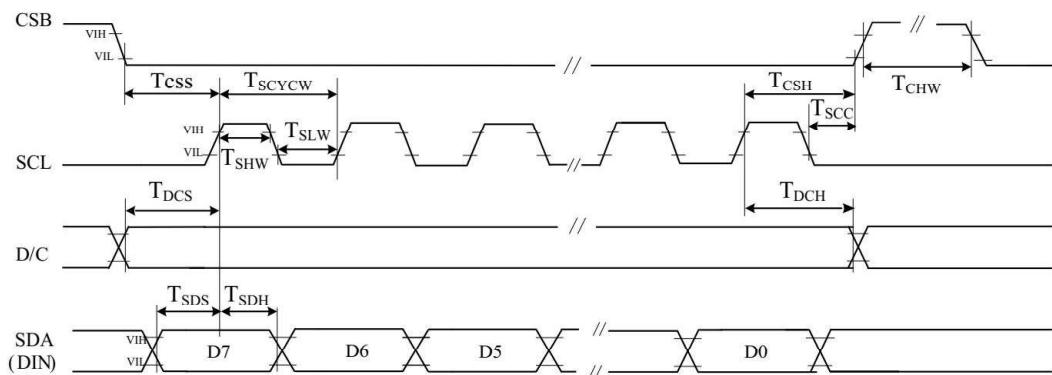

### 6.3.1 MCU Interface Selection

The 3-wire/4-wire serial port as communication interface for all the function and command setting.

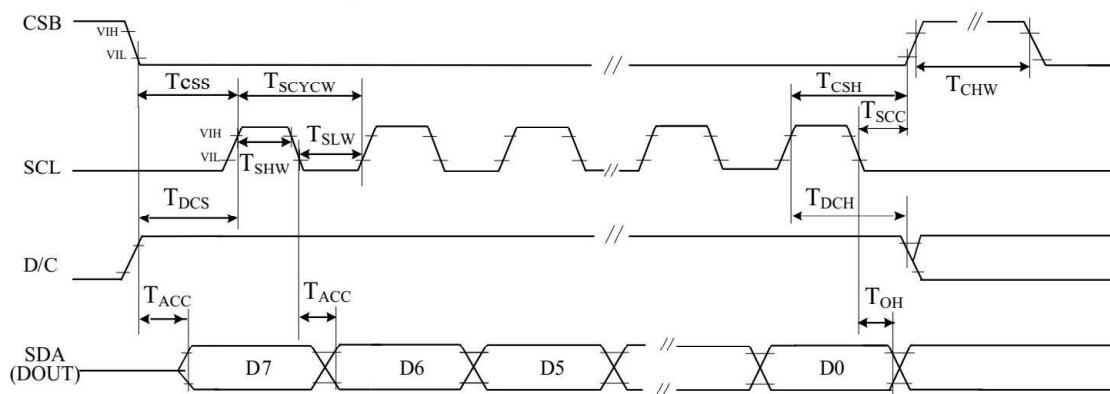

3-wire/4-wire engine act as a “slave mode” for all the time, and will not issue any command to the 3-wire/4-wire bus itself.

Under read mode, 3-wire/4-wire engine will return the data during “Data phase”. The returned data should be latched at the rising edge of SCL by external controller. Data in the “Hi-Z phase” will be ignored by 3-wire/4-wire engine during write operation, and should be ignored during read operation also. During read operation, external controller should float SDA pin under “Hi-Z phase” and “Data phase”.

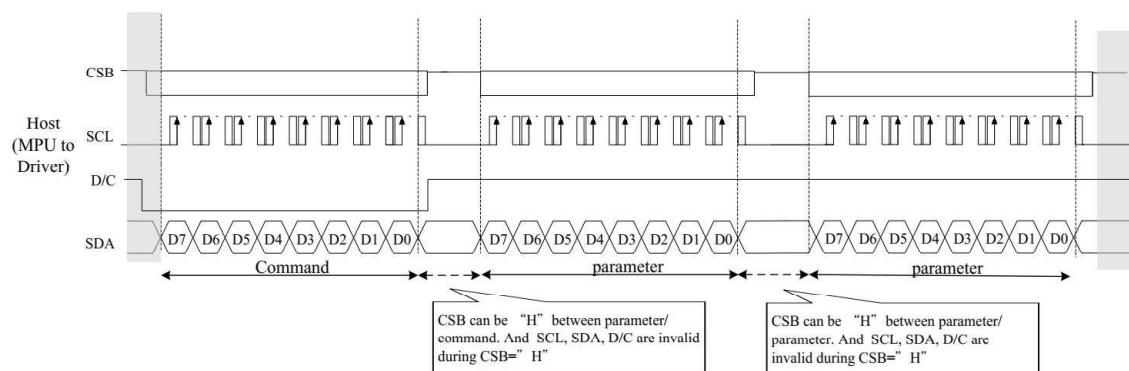

### 6.3.2 MCU Serial Interface (4-wire SPI)

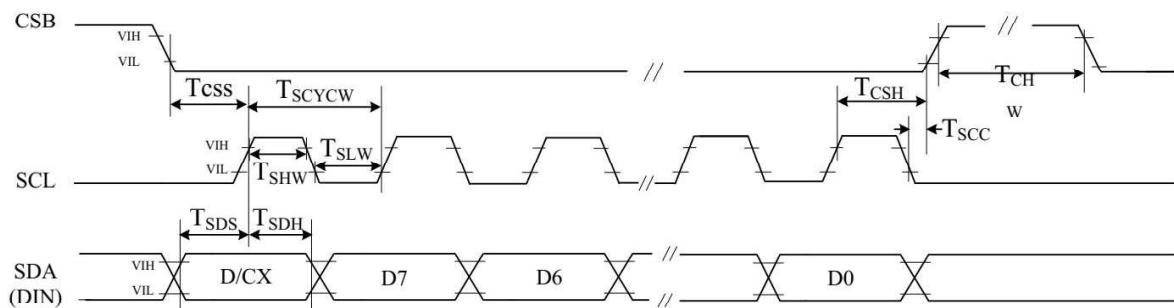

4 pin serial interface characteristics(write mode)

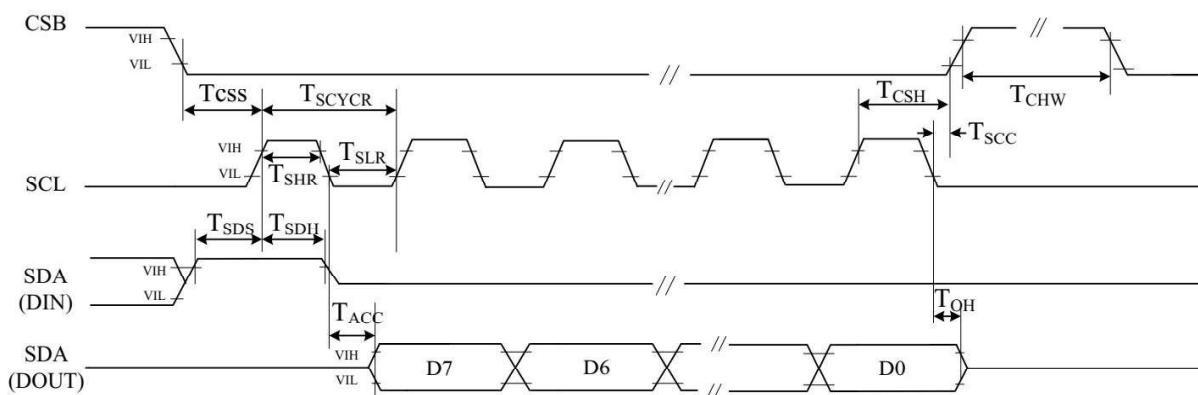

4 pin serial interface characteristics(read mode)

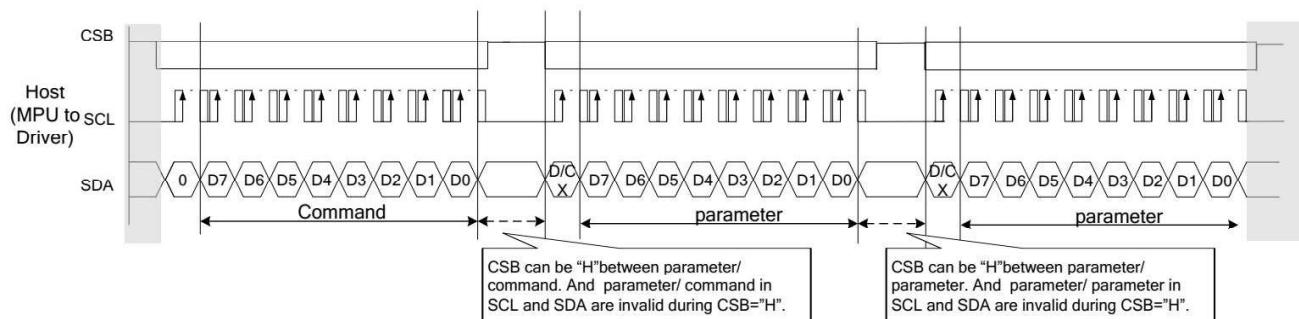

### 6.3.3 MCU Serial Interface (3-wire SPI)

3 pin serial interface characteristics (write mode)

3 pin serial interface characteristics (read mode)

Priority of VCOM setting: VCMZ > NORG > FOPT > VC\_LUTZ

FOPT setting is part of refreshing display.  
FOPT: Power off floating.

#### Notes:

1. Non-select gate line keep at VGN for DSP/DRF and AMV
2. Dummy source line follow LUTC for DSP/DRF
3. When SHD\_N become low, DCDC will turn off. Register and SRAM data will keep until VDD turn off. SD output and VCOM will base on previous condition. It may have two condition:0V or floating.
4. When RST\_N become low, driver will reset. All register will reset to default value. All of the driver's functions will disable. Source/Gate/Border/VCOM will be released to floating

| Description | <p>-The command defines as :</p> <ul style="list-style-type: none"> <li>● After power off command, driver will power off base on power off sequence.</li> <li>● After power off command, BUSY_N signal will drop from high to low. When finish the power off sequence, BUSY_N singal will rise from low to high.</li> <li>● Power off command will turn off charge pump, T-con, source driver, gate driver, VCOM, temperature sensor, but register and SRAM data will keep until VDD off.</li> <li>● SD output and VCOM will base on previous condition. It may have two conditions: 0v or floating.</li> </ul> |

## Description

-The command defines as :

- While finished the data transmitting, user must send this command to driver and read Data\_flag information.

1<sup>st</sup> Parameter:

| Bit | Name      | Description   |
|-----|-----------|---|
| 7   | Data_flag | 0: Driver didn't receive all the data.<br>1: Driver has already received all of the one frame data. |

After "Data Start" (10h) or "Data Stop" (11h) commands and when data\_flag=1, BUSY\_N signal will become "0" and the refreshing of panel starts.

## Restriction

This command only actives when BUSY\_N = "1".

## Description

The command can enable the internal sequence to execute several commands continuously. The successive execution can minimize idle time to avoid unnecessary power consumption and reduce the complexity of host's control procedure. The sequence contains several operations, including PON, DRF, POF, DSLP.

AUTO (0x17) + Code(0xA5) = (PON→DRF→POF)

AUTO (0x17) + Code(0xA7) = (PON→DRF→POF→DSLP)

Border output voltage level: The level selection is based on mapping LUT data.  
 Ex: Gray 1 waveform is mapping to 15V, without VCOM offset, the real output on Boarder pin shall be 15V.  
 Boarder output will follow FOPT definition being defined in R00h.

## 9. Handling, Safety and Environment Requirements

### Warning

The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the electrophoretic material. In case of contact with electrophoretic material, wash with water and soap.

### Caution

The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components. Disassembling the display module.

Disassembling the display module can cause permanent damage and invalidates the warranty agreements.

Observe general precautions that are common to handling delicate electronic components. The glass can break and front surfaces can easily be damaged. Moreover the display is sensitive to static electricity and other rough environmental conditions.

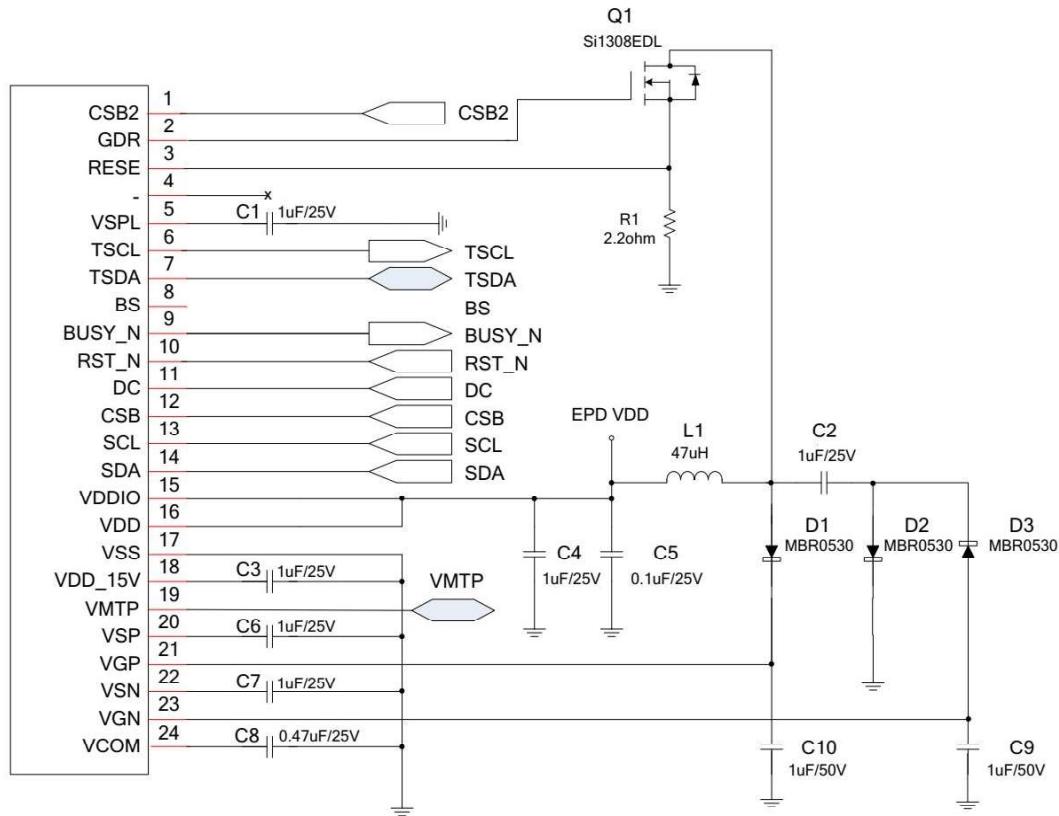

| Data sheet status   |  |

| Product specification   | This data sheet contains final product specifications. |
| Limiting values   |  |
| Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability. |  |
| Application information   |  |
| Where application information is given, it is advisory and does not form part of the specification.   |  |
